

This map displays the spatial distribution of the PM10 mixing ratio across the United Kingdom. The color scale indicates the concentration in g/kg, ranging from 0 (lightest) to 25 (darkest). The map shows higher concentrations in the southeast, particularly around London, and lower concentrations in the northwest and central regions. Major cities like London, Manchester, and Birmingham are marked with their names. The map also shows the coastlines of the UK and the surrounding waters.
